GLOBAL 500: THE WORLD'S LARGEST CORPORATIONS

FORTUNE

The image shows the cover of the Fortune Global 500 magazine. The top half is white, and the bottom half is green. The word 'FORTUNE' is in large, bold, black letters. Below it, the number '500' is rendered in a large, stylized, white font with a green outline. The word 'GLOBAL' is written in yellow, bold, sans-serif capital letters inside the first '5' of the '500'. At the bottom, a black banner contains the text 'The New Playbook for Business Reinvention' in yellow, bold, sans-serif capital letters.

GLOBAL

The New Playbook for Business Reinvention

The Global 500 shrank a little over the past year. After reaching a record high of \$33.3 trillion in the 2020 edition, total revenue for the world's biggest companies fell 4.8% to \$31.7 trillion this year. It was the first decline in half a decade. The culprit, of course, was COVID-19, which slammed huge swaths of the global economy as countries went into lockdown. Cumulative sales in both the energy and automotive sectors, for example, fell by more than 10%. And all six of the airlines that appeared in last year's ranking failed to make the cut this year. Despite the setbacks, the heft of the Global 500 remains formidable: The combined sales of the companies on the list are equal to more than one-third of global GDP.
